The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are useful for the serodiagnosis and treatment of Chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable bindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also thought to play a role in the pathogenesis of atherosclerosis and coronary heart disease. The present sequence is a protein isolated in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent offits media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see Y34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Y34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see X91990) of Chlamydia pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

Chlamydia pneumoniae antigen 10-OCT-2000 (first entry)

CPN100624

RY-64

```
The nucleic acids may be used for the recombinant production of the Chlamydia polypeptides (either in vivo or in vitro) according to standard recombinant DNA methodologies. The polypeptides may then be used to vaccinate against Chlamydia infections in mammals. Chlamydia, such as C. pneumoniae, are pathogens responsible for upper respiratory tract infections such as community acquired pneumonia, acute respiratory disease and bronchitis and may be implicated in atherosclerotic changes and asthma. The nucleic acids may also be used as probes for detecting the presence of Chlamydia nucleic acids in samples (and therefore diagnose infections) and the proteins may be used as antigens for the production of antibodies that may be used to detect Chlamydia proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               02-NOV-1998;

The invention relates to an isolated Chlamydia species high molecular weight (HMW) protein having an apparent mol. wt. of 105-115 kD as determined by SDS-PAGE. The HMW proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, lymphogranuloma venereum (LGV), cervicitis, epididymitis, endometritis, pelvic inflammatory disease (PID), salpingitis, tubal occlusion, cervica cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and diagnosis. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 bacterial infection; conjunctivitis; lymphogranuloma venereum; LGV; cervicitis; epididymitis; endometritis; pelvic inflammatory disease; PID; salpingitis; tubal occlusion; infertility; cervical cancer;

                    The present invention relates to new nucleic acid sequences and the proteins encoded by the nucleic acid sequences. The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are useful for the serodiagnosis and treatment of chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated Chlamydia species high molecular weight (HMW) protein having an apparent mol. wt. of 105-115 kD as determined by SDS-PAGE. The HMW proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, lymphogranuloma venereum (LGV), cervicitis, epididymitis, endometritis, pelvic inflammatory disease (PID), salpingitis, tubal occlusion, cervica cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and diagnosis. The present sequence represents a C. trachomatis HMW protein.

It also has an association with atherosclerosis and asthma. The 98 kDa outer membrane protein is a C. pneumoniae-specific antigen which can confer immune protection against chlamydial infection. The nucleotide sequence encoding the protein or the protein inself may be administered as a vaccine to prevent or treat infection and they may also be used to diagnose infection. The gene encoding CPNI00640 was amplified from Chlamydia pneumoniae genomic DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Qy
                                       The invention relates to an isolated Chlamydia species high molecular weight (HMW) protein having an apparent mol. wt. of 105-115 kD as determined by SDS-PAGE. The HMW proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, pelididymitis, endometritis, pelvic inflammatory disease (PID), salpingitis, tubal occlusion, cervical cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and diagnosis. The present sequence

The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see Y34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.

                                               pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Birkelund S, Mygind P;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This polypeptide comprises the novel 97.6 kDa surface exposed protein Ompl1 of the human respiratory pathogen Chlamydia
                                                                                                                                                                                                                                                                                                                                                           X06823) isolated from a C. pneumoniae expression library. The invention provides 12 novel surface exposed proteins, Omp4-Omp15 (see W88417-28), and nucleic acid sequences encoding them (see X06816-27). A new species specific test is claimed that is used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 7; Page 63-65; 115pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence is a Chlamydia antigen of the invention, designated CPN100634. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 16; Fig 1; 174pp; English.

Hackstadt T., Messer R., Cleplak W., Peacock M.G.;

"Evidence for proteolytic cleavage of the 120-kilodalton outer
membrane protein of rickettsiae: identification of an avirulent
mutant deficient in processing.";
Infect. Immun. 60:159-165 (1992)
-i- FUNCTION: THE 120 KDA SURFACE-EXPOSED PROTEIN IS A MAJOR
STRUCTURAL PROTEIN WHICH MAY PLAY A ROLE AS A RICKETTSIAL
VIRULENCE FACTOR AND/OR IMMINOGEN DURING INFECTION.
-i- FUNCTION: THE 32 KDA BETA PEPTIDE MAY SERVE AS A MEMBRANE ANCHOR.
-i- SUBCELLULAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED BY A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   STRAIN=WILMINGTON; MEDLINE=94040787; PubMed=8224886; MEDLINE=94040787; PubMed=8224886; Hahn M.-J., Kim K.-K., Kim I., Chang W.-H.; Cloning and sequence analysis of the gene encoding the crystalline surface layer protein of Rickettsia typhi.";
